

## What is this test called?

# Multi-target Stool DNA Test (MT-sDNA)

## What type of test is this?

This is a test that checks your stool for blood and abnormal DNA from polyps or cancer. It is done at home using a kit your doctor will have shipped to your home.

## How is the test done?

You will do this test at home. You do not have to change your diet for this test. You will have a bowel movement into the container provided in the kit. You will also collect a small sample of that stool and put it in a sample vial. The kit will come with instructions for how to mail your bowel movement and stool sample to the lab.

## Will I have to take time off work?

No. You do not need to take time off work. You do this test at home at your convenience.

## How often should I do this test?

**EVERY 3 YEARS**

## How much does it cost?

Some insurance plans, including Medicare, cover this test. Check with your insurance company about your coverage.

## What happens if the test is positive?

If the test is positive, you will need a colonoscopy to find out whether there are polyps or cancer.
